## 更改域配置后、没有可用的域控制器

[https://kb-cn-stage.netapp.com/on-prem/ontap/da/NAS/NAS-KBs/No\\_available\\_Domain\\_controller\\_afte...](https://kb-cn-stage.netapp.com/on-prem/ontap/da/NAS/NAS-KBs/No_available_Domain_controller_afte...)

Updated: Wed, 22 Apr 2026 10:05:17 GMT

### 适用场景

- ONTAP 9
- CIFS/SMB

### 问题描述

- 在维护 Active Directory 域期间、添加了新的域控制器(DC)、并删除了旧的DC。
- 维护后、SVM 未连接到新的DC。
- ONTAP 事件日志中的错误：

```
Message: secd.ldap.noServers: None of the LDAP servers configured for Vserver (svm01) are currently accessible via the network for LDAP service type (Service: LDAP (Active Directory), Operation: SiteDiscovery).
```
