## 克隆拆分未在进行中、并且没有作业ID

[https://kb-cn-stage.netapp.com/on-prem/ontap/Ontap\\_OS/OS-KBs/Clone\\_Split\\_is\\_not\\_progressing\\_wit...](https://kb-cn-stage.netapp.com/on-prem/ontap/Ontap_OS/OS-KBs/Clone_Split_is_not_progressing_wit...)

Updated: Wed, 22 Apr 2026 07:31:14 GMT

### 适用场景

- ONTAP 9.11.0
- 已拆分卷克隆

### 问题描述

- 克隆拆分未显示任何进度。

```
Cluster::*> volume clone split show -instance
```

```
Vserver Name: svml  
FlexClone volume: clone_volume  
Percentage Complete: 0  
Blocks Scanned: 0  
Blocks Updated: 0
```

- 由于 Operation is not in progress、无法停止克隆拆分。

```
Cluster::*> vol clone split stop -vserver svm1 -flexclone clone_volume
```

```
Error: command failed: Unable to stop clone split on volume "clone_volume" of  
Vserver "svm1". Reason: Operation is not in progress.
```

- 没有为克隆拆分离出任何作业

```
Cluster::*> job show -id 100957
```

```
There are no entries matching your query.
```

```
Cluster::*> job history show -id 100957
```

```
There are no entries matching your query.
```

- 由于正在进行克隆拆分、无法通过卷移动克隆。

```
Cluster::*> volume move start -vserver svm1 -volume clone_volume -destination-  
aggregate aggr2
```

```
Error: command failed: Cannot move volume "clone_volume" in Vserver "svm1".  
Reason: The volume is undergoing a FlexClone split operation. Use the "volume  
clone split show" command to monitor the split operation for completion, or use  
the "volume clone split stop" command to stop the split operation.
```
