停止卷克隆拆分后，卷移动失败

https://kb-cn-stage.netapp.com/on-prem/ontap/Ontap_OS/OS-KBs/Volume_move_fails_after_stopping...

Updated: Wed, 22 Apr 2026 07:30:14 GMT

适用场景

- ONTAP 9.6
- ONTAP 9.7

问题描述

- 停止卷克隆拆分操作后 `volume move start`，命令失败：

```
Cluster01::> volume move start -volume test_clone -destination-aggregate  
aggr1
```

```
Error: command failed: Cannot move volume "test_clone" in Vserver "svm1".  
Reason: The volume is undergoing a FlexClone split operation. Use the  
"volume clone split show" command to monitor the split operation  
for completion, or use the "volume clone split stop" command to stop the  
split operation.
```

- `volume clone split status` 命令将显示所有零：

```
Cluster01::> volume clone split status
```

```
          Blocks
-----
Vserver  FlexClone  Scanned  Updated  % Complete
-----
svm1     test_clone    0        0        0
```
