

Cisco Nexus 5596 集群交换机重新启动并挂起

https://kb-cn-stage.netapp.com/on-prem/Switches/Cisco-KBs/ClusterSwitchMissing_Alert_reported_du...

Updated: Wed, 22 Apr 2026 07:32:51 GMT

适用场景

- Cisco Nexus 5596 集群交换机
- ONTAP 9
- AFF/FAS

问题描述

- Cisco Nexus 5596 交换机重新启动、事件日志中显示以下警报：

```
[Node-1: cshmd: hm.alert.raised:alert]: Alert Id = SwitchIfIslDownWarn_Alert ,  
Alerting Resource = sw01(XXXXXXXXXXXX)/port-channell raised  
[Node-1: cshmd: hm.alert.raised:alert]: Alert Id = ClusterSwitchMissing_Alert ,  
Alerting Resource = Node-1 raised by monitor cluster-switch].  
[Node-1: mgwd: callhome.hm.alert.major:alert]: Call home for Health Monitor  
process cshm: ClusterSwitchMissing_Alert[Node-1 by monitor cluster-switch]
```

- 交换机只有在重新启动后才会启动、并且在重新启动后ClusterSwitchMissing_Alert 才会被清除：

```
[Node-1: cshmd: hm.alert.raised:alert]: Alert Id = SwitchReboot_Alert ,  
Alerting Resource = sw02(XXXXXXXXXX) raised by monitor cluster-switch  
[Node-1: cshmd: hm.alert.cleared:notice]: Alert Id = ClusterSwitchMissing_Alert  
, Alerting Resource = Node-1 cleared by monitor cluster-switch  
[Node-1: cshmd: hm.alert.cleared:notice]: Alert Id = SwitchReboot_Alert ,  
Alerting Resource = sw02(XXXXXXXXXX) cleared by monitor cluster-switch
```
