

CONTAP-363985 : 在 ISL 接口上报告误报 CSHM "SwitchIfDead_Alert"

<https://kb-cn-stage.netapp.com/on-prem/ontap/OHW/OHW-Issues/CONTAP-363985>

Updated: Wed, 22 Apr 2026 07:23:58 GMT

问题描述

- ONTAP 以太网交换机运行状况监视器 (CSHM) 可能会在群集交换机内 ISL 接口上报告"SwitchIfDead_Alert"警报
- 尽管交换机内 ISL 端口处于正常运行状态
- 因此，这可能是一个误报警报，例如

```
hm.alert.raised: Alert Id = SwitchIfDead_Alert , Alerting Resource = sw1/Slot: 0  
Port: 56 100G - Level raised by monitor ethernet-switch
```

- 或

```
hm.alert.raised: Alert Id = SwitchIfDead_Alert , Alerting Resource = sw2  
(XX:XX:XX:XX:XX:X1)/bridge raised by monitor ethernet-switch
```
